ONE OF NAPOLEON'S great ideas was to have a perfect Travel-Library made for his personal use. Each book was to be printed especially for it in the best manner possible, and to be handsomely and substantially bound; but by dispensing with broad margins, thick covers and all other non-essentials, an elegant book was to be compressed into one quarter of the space usually allotted to it. Napoleon never could get the books made.

CONTENTS AND ARRANGEMENT.

It is the hope of the compilers of this book that its arrangement will be found so convenient and systematic that there will be little need of referring to an Index; but one as condensed as possible is here given for use in case of difficulty.

The order of arrangement is from general to particular, and the particulars are arranged in alphabetical order. The United States as a whole is treated first, and then the various States follow alphabetically. Cities are placed directly after the States in which they are situated. All Indexes and other matter pertaining to each map will be found immediately preceding or following it.

The Statistics of each State, including its growth, and the growth of all large cities in it, will be found at the commencement of each Index.

The Railroad Index for each State precedes the Index of Places, and covers every mile of railroad in the State.

The Capitol building, Coat of Arms, and Pet Name of each State will be found illustrated at the commencement of each State index.

Running heads at the top of each page and foot lines on the bottom of maps are intended to guide the reader instantly to the information required.

Owing to the grouping of certain States on maps with others, the following exceptions from the alphabetical order have been found necessary:

Alaska is with California.
Indian Territory is with Texas.
Maryland is with Delaware.
Nevada is with California.
New Hampshire is with Vermont.
Oklahoma is with Texas.
Tennessee is with Kentucky.
Wisconsin is with Michigan.
Jersey City is with New York City.

The first figure shows page of Map, the second figure the beginning of Text. City Maps in Italics.

EXPLANATION.

This little book is deliberately made as small as consistent with containing full information, so that it may be carried in the hand and constantly used. It is not a toy, but a working atlas, and one which will answer every question that ninety-nine travelers out of a hundred ever will ask of such a work, and nine out of ten questions which the hundredth man can ask. The publishers of this Atlas have been for years making maps varying in size from 4 feet by 6 feet to these miniatures 4½ inches by 6½ inches. The result of their years of experience is that by the wise omission of unimportant details a little map may be made as legible as a big one, and ten times as useful.

They have a series of maps of the United States which average six times the size of these, and are absolutely packed with information, and yet they find that the additional five sixths of the information is not used once while the first sixth is used ten times. Thus, on the map of New York State, in their Vest-pocket Series of State maps, over 3,000 places are indexed, while on the map in the Atlas only 655 are shown; yet these 655 include every place of over 500 inhabitants, and together the 655 contain nine tenths of the town population of the State. Every railroad station at which any train faster than a way freight would stop is shown on the little map, and every mile of railroad track in the State. As the non-essentials are removed it becomes much more easy to find the essentials.

New York State is instanced, as it is the largest and most crowded of any in the series. The habitations of over 6,000,000 people have here to be delineated in a space 6 x 10 inches, and even here the test is successfully encountered. But New York State is the least adequate of any of these State maps. In most of the others the line of population reaches down to villages of 200 population.

Another plan has been adopted in compressing the plans of the 23 great cities within this limited space. In a city map every street and every important hotel and public building must be shown; therefore, nothing in detail can be omitted; but in every American city one quarter of the space occupied contains three quarters of the population, and all the business houses, hotels and public buildings. Thus, by showing only this quarter, without omitting a detail, it has been found possible to delineate successfully all the great American cities. Chicago, the greatest of American cities in extent, has been the most difficult to treat, and yet, by the simple device of showing its general features on one page, its crowded business section on another, and the great Exhibition grounds on still another page, it has been found feasible to get into this condensed form all that any traveler will need in the way of a map of Chicago and its Exposition.

The general plan of the work may be gathered from what has been said, but it may be of interest to learn just how this book is intended to be used. Chicago and its Exposition may be considered an example. First, Chicago is shown on the maps of the United States, pages 9 and 13, in its relation to the whole country. No railroads are shown on these maps, as they would destroy their legibility. Then on Trunk-line map of the eastern portion of the United States, pages 20 and 21, a route from anywhere to that great city may be traced. Then, on page 74, the map of the State of Illinois shows all its railroads and environs. The sketch map of the city, on page 78, shows its general plan and the vastness of its extent, while the large scale map, on page 79, of the heart of the city shows every one of the great buildings which make this, the youngest, the most crowded of all the great cities in the world. The next opening shows the greatest of all expositions on a scale worthy of its grandeur, and big enough to be a perfectly practical guide to any place on the grounds.

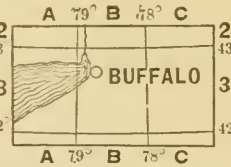
Thus, nothing is slighted or omitted, but, by treating one thing at a time, every detail down to the minutest is shown in a book which weighs only twelve ounces, and can be shoved into a coat pocket.

It will be noted that almost two thirds of the book is devoted to index. This is not a violation of the principle that in such a work there should be nothing for waste or show, for this index is the very essence of information. It shows, first, between what parallels of longitude (D) and latitude (9) the place sought can be found, and thus enables you to find it at a glance; and then it tells what its population is.

Though this explanation may seem in length out of proportion to the size of the book, the kind reader must remember that it is no easy task to teach one to use a fine tool, so as to get all the service possible out of it.

Very respectfully,
THE MATTHEWS-NORTHRUP CO.,
Map Makers and Publishers,
BUFFALO, N. Y.

INDEXING.—On every State map the space between the different parallels of latitude and longitude is designated by letters and figures on the margins of the maps, so that the square made on the map by the parallels is designated by a letter and figure. Buffalo, which is between the 78th and 79th degree of longitude, and the 42d and 43d degree of latitude, is thus in the square B3. The parallels assist the eye to determine the location almost instantly.



On the city maps imaginary lines have to be drawn midway between the various letters and figures.

ABBREVIATION.—a (*about*) is placed before all figures taken from sources other than the United States census of 1890. That census included the population of the larger towns only. These other figures are not official, but are from the best local authorities.

GROWTH AND DISTRIBUTION OF POPULATION.

Growth in One Hundred Years.—Though the growth of a country is more a matter of history than of geography, it is necessary to the completeness of an Atlas of the United States to include so much of history as to give an idea of the marvelous growth of the Country. Without such knowledge, it is almost impossible to understand its present or to predict its future. A study of the map on the opposite page, in connection with the one which immediately follows it, will give to almost any one a clearer conception of what the United States is, and of what it is destined to become, than many words of explanation.

The figures from the various censuses which follow will supplement the map.

Date Census.	Territory Settled with over 2 to sq Mile.	Total Population.
1790	239,935	3,929,214
1800	305,708	5,308,483
1810	407,945	7,239,881
1820	508,717	9,633,822
1830	632,717	12,866,020
1840	807,292	17,069,453
1850	979,249	23,191,876
1860	1,194,754	31,443,321
1870	1,272,239	38,558,371
1880	1,569,570	50,155,783
1890	a2,000,000	62,840,835

Distribution of Population.—The territory of the United States is so vast that its people, numerous as they are, would give but a sparse population if spread over it in anything like an equal ratio. Sixty-three million people dispersed over three million square miles would be widely scattered and difficult to reach. The fact is that the great American people have as yet settled their territory in a small part only. And that, though one half of the area may be said to be somewhat settled, by far the greater part of the United States is still just beginning to be utilized.

The total figures are so well known that the natural impulse to strike an average leads almost every one into error. Few realize that the United States is made up of a comparatively small portion well settled, and then a much larger portion sparsely settled, and that the vast majority of the area, by comparison, can hardly be called settled at all.

The map showing distribution of population gives us the following round figures:

16,000,000	living on	110,000	sq. m.,	av.	145
12,000,000	"	" 180,000	"	"	66
26,000,000	"	" 900,000	"	"	29
4,000,000	"	" 300,000	"	"	13
4,000,000	"	" 600,000	"	"	7
750,000	"	" 925,000	"	"	0.8

An analysis of these figures shows that one fourth the population lives in one twenty-fifth of the area, one half the population in one tenth of the area, six sevenths of the population in four tenths of the area, eleven twelfths in one half of the area.

The quarter of the population who live in one twenty-fifth of the area are less closely crowded than the people of any prominent European country except Spain or Russia. If the whole United States were as thickly settled as this part of it, its population would be over four hundred millions.

If the whole country were settled as closely as the part east of the Mississippi and north of the Ohio River, where now almost one half of the people live in one tenth of the area, the total population would be over three hundred millions, and then the population would be less than half so dense as that of Germany.

The enormous possibilities of growth of the population are readily seen from these figures taken in connection with those of the previous growth, as shown by the census reports.

Centers of Population.—The unequal distribution of the population of the United States, and its remarkable number of great cities, occasion striking peculiarities in the location of centers of population.

These peculiarities make it far less difficult to conduct business or to travel in this country than the first glance at its enormous area would lead one to anticipate. For purposes of business or travel, almost any point can be reached with comparative ease from one of the centers of population. The great comfort and cheapness of railroad travel in America, compared with what can be found elsewhere, also reduce the actual effect of great distances, so that intercommunication between the inhabitants of the United States is more general than it is between the people of the far more compact countries of the Old World.

The *Geographical Center* of the country is at Fort Riley, in the northeastern portion of Kansas and in the extreme western part of the well-settled portion of the country; but for the last 30 years the *Center of Population* has been within 75 miles of Cincinnati, O., and is now 56 miles west of that city and near Greenburg, Ind. [By the center of population is meant that place to which all the inhabitants of the country could be collected with the least aggregate amount of travel — the center of gravity of the population.]

That *Cincinnati* is entitled to the designation of the central city, can be seen by reference to the circle drawn on the map at a distance of 750 miles from it. This circle includes every important city in the country, except Portland, Me., Galveston, Tex., Denver, Colo., Salt Lake City, Utah, and San Francisco and the other cities on the Pacific Slope. New Orleans, Boston and Duluth are about the extreme limits of this circle. The most distant of them can be reached within 36 hours on an express train, and almost any other city within 24 hours.

A similar circle from *Chicago* reaches almost the same territory, except in the extreme east and south, as will be readily seen. Perhaps the greater facilities of railroad communication make Chicago practically, though not geographically, equally central with Cincinnati.

Another circle drawn from *Buffalo* with a radius of 450 miles, the distance to Chicago or Boston, shows that, with one possible exception, more large cities and a greater amount of thickly populated territory can be reached in a single night's journey from Buffalo than from any other large city in the United States. Certainly, one half the population of the United States is within 500 miles of Buffalo. The only other large city for which almost the same claim can be made is *Pittsburg*. Though not so easy of access from Boston and New England points, in other respects it has the same advantages as Buffalo.

The most surprising concentration of urban and densely settled population is shown by the circle of 200 miles drawn from *New York City*. Within that circle can be found, in an easy half-day's journey, over one fifth of the population of the United States, and almost one half of the number of those who live in cities of over 8,000 inhabitants. The entire territory outside of the 750-mile circle from Cincinnati does not contain one half so many inhabitants as are confined in this small circle, which in area is less than a thirtieth of the United States.

THE GREAT CITIES.—The National Census of 1890 arranges the cities of over 100,000 population in the following order:

RANK.	NAME.	1890.	1880.	Per Ct. of Growth
1	New York, N. Y.	1,515,301	1,206,299	26
2	Chicago, Ill.	1,099,850	503,185	119
3	Philadelphia, Pa.	1,046,964	847,170	26
4	Brooklyn, N. Y.	806,343	566,663	42

The census of 1890, from which the figures of this Atlas are taken, was in the main correct and fair, but owing to the adherence necessary in it to the official boundaries of cities, its figures give in some respects an incorrect idea of the absolute and relative importance of the great cities of the country. This is most marked in the case of the greatest of all American cities, New York, which, the very bulletin giving the populations of cities says, is fairly entitled to be called a city of 3,000,000 inhabitants and second only to London.

For all the purposes which make a city really great, the suburban cities which lie within an easy hour's journey may fairly be counted. The people who live in smaller cities within 25 miles of the center of any of these great cities have as much effect upon the financial, business, art, amusement and social life of the great city as the people who live in the more remote districts within the city limits. These dwellers in suburban cities are active and influential classes in American life and their enterprise helps directly to make the central city great. The journey of 25 miles or less is made so quickly and cheaply by steam communication that it attracts instead of repelling the highest type of American city man.

The growth of the urban population of the country has in many parts been more marked in these suburban and "branch" cities than it has been in the parent city, and a comparison with these cities taken into account will be found to explain many apparent discrepancies between the well-known actual facts of the relative importance of certain great cities and the city-limit figures of the census.

The great cities would be grouped as follows if the cities of over 8,000 inhabitants which lie within 25 miles of them were counted. Only the cities of over 8,000 population have been included in this arrangement, as the attempt is made to account for the urban population only. The tributary cities have been arranged in the order of the proximity of their centers to the center of their chief city, so that any one may decide for himself as to the propriety of the grouping.

N. B.—There are several small places within the 25-mile circle of Chicago, but none which in 1890 was over the 8,000 limit by the official census. The phenomenal growth of Chicago, previous to 1890, which growth has been since continued, makes it certain that it is in 1893 fairly entitled to second place even in this grouping.

Rapid Growth of Cities.—The ten years from 1880 to 1890 saw a growth in American cities which had never been equaled in the world. The population living in cities of over 8,000 inhabitants increased from 11,318,547 in 1880 to 18,235,670 in 1890—an increase of 60 per cent.

In order to show to which cities this growth has been mainly due, the names of all of them which in 1890 had 20,000 inhabitants, and which have grown at least 50 per cent. in the decade, are here given, arranged in the order of their rapidity of growth.

For convenience of comparison and reference the cities exceeding 75,000 in population are grouped by themselves first. There are 39 such cities in all; 18 of them are over 50 per cent. Twenty-six of the 48 cities between 35,000 and 75,000 in population follow, and then come 31 out of the 79 cities between 19,922 and 35,000 in population.

The growth of any of the cities which are not included in this list can be ascertained by reference to the "Statistics" tablet at the commencement of the text for each State.

The city of Spokane, which just failed to reach the 20,000 limit, is included in the list. It had the most remarkable growth of any city in the United States. The only other cities not included in the list which compare with it were Roanoke, Va., and San Diego, Cal. Each of these had 16,159 inhabitants in 1890. Roanoke had no population given in 1880. San Diego had 2,367, and grew 513 per cent. El Paso, Tex., Superior, Wis., and Ashland, Wis., grew from less than 1,000 to 10,000 and over.

STANDARD TIME.

In the running of all the railroads of the United States and Canada only four different times are used. Each varies from the others by even hours. In almost every place in the country the Railroad or Standard Time is used as the local time also. The places which still cling to the solar or actual time are so few, and decreasing in number so rapidly, that it is unnecessary to enumerate them.

An inspection of the preceding map will explain how the division is made. The whole country is divided into four sections, approximately fifteen degrees across. The time in the whole first or "Eastern" section is that of the 75th meridian from Greenwich, making it just five hours slower than London time. This happens to coincide almost exactly with the solar time of Philadelphia.

The "Central" section uses 90th meridian time, six hours slower than Greenwich time, and almost exactly the time of St. Louis.

The "Mountain" section uses 105th meridian time, seven hours slower than Greenwich time, and almost exactly the time of Denver.

The "Pacific" section uses 120th meridian time, eight hours slower than Greenwich and ten minutes faster than San Francisco solar time.

The divisions are theoretically equal, but by following the dotted lines on the map, which show the dividing points, it will be seen that a very considerable variation from the theoretical straight line is made. This is because the effort is made to run each railroad system throughout on the same time, or to change only at great junction points.

Of course, at the cities where the division is made there are railroads running on different times, and the city has to chose between two times. The principal division cities are enumerated below, with the time chosen for their local use:

Railroad Index to Trunk-line Map of the United States and Canada.

For Map see Pages 18 to 23.

The three maps herewith together form a map of the whole United States, excepting the territories of Arizona and New Mexico and parts of California, Texas and Oklahoma; for these, see the State maps. It will be noticed that in this index the three maps are treated as one.

References 1 to 9, and letters A to M, are in Northwest section. References 1 to 7, and letters N to Z, are in Eastern section. References 8 to 13, and letters M to Y, are in Southern section.

For the convenience of the traveler the trunk lines are indexed by the name of the route or system, as well as by the corporate names of the railroads composing them; thus, the Atlantic & Pacific R. R. is indexed by a reference to the Santa Fé Route, of which it makes a part.

For the same purpose the continuations of through car lines are noted to terminal points. For example, the Atlantic Coast Line is traced from Florida to New York City and Boston, though the corporation controls lines only from Charleston to Richmond.

In these maps only the trunk or through lines are given, and no attempt is made to give all local branches of these lines. By reference to the proper State map all such local branches and spurs will be found without difficulty.

SAN FRANCISCO.

The principal business streets are Market, California, Montgomery and Kearney streets. The most elegant residences are to be found on California Street and Van Ness Avenue.

Chinatown comprises several blocks north of California and west of Kearney Street. Streets running north and southwest from Market Street are numbered from the latter street The water front is the starting point for numbers on all streets running west and southwest therefrom, except on streets running westerly and starting at Market Street. On these streets the numbers begin at Market Street.

Each block, bounded by principal streets, commences with a new 100.

Golden Gate Park extends 3½ miles due west to the Pacific Ocean and is over half a mile broad. It commences about three miles from the business centre. The Cliff House and Seal Rocks are about one-half mile north of the Park, on the beach.

DENVER.

The most prominent business streets are 16th, Larimer, Lawrence and 15th streets The residence section is on Capitol Hill, and Lincoln, Grant and Sherman avenues are the principal streets.

Streets running from southwest to northeast begin their numbers at the Platte River and increase to the northeast. This includes Larimer and all parallel streets. All streets crossing Larimer are numbered from Cheyenne Street to the northwest

On Broadway, and all streets running parallel therewith, the numbers start with 100 at 1st Avenue and increase northward, and avenues crossing Broadway are numbered to the east and west from that street. That portion of these avenues located west of Broadway is designated by adding W. to the address, thus: 10th Avenue W. Each block commences with a new 100.

WASHINGTON, D. C.

The City of Washington is divided east and west by North Capitol Street and South Capitol Street, and north and south by East Capitol Street and the Mall (Government grounds). All addresses have the additional designation of northwest, southwest, northeast and southeast, according to their direction from the Capitol; for example: Northeast is the district between North Capitol Street and East Capitol Street. The streets named by the letters of the alphabet and numerals respectively are laid out at right angles, the former running east and west from North and South Capitol Streets, and the latter running north and south from East Capitol Street and the Mall. The avenues named for States of the Union run diagonally from different centers, the most prominent of the latter being the Capitol and the Executive Mansion. The numbering of houses is on the principle of commencing each block with a new 100.

CHICAGO.

The city is divided into the South, North and West sides by the Chicago River and its branches. The business section is on the South Side, immediately south of the Chicago River. The finest residence portions are on the North Side along Dearborn Avenue and adjacent streets, and on the South Side along Michigan Avenue and the Boulevards. A grand system of boulevards extends around the city and connects the principal parks.

Lincoln Park, on the North Side, is the most attractive. Jackson Park, on the South Side, about seven miles from City Hall, is the site of the World's Fair. The other large parks are Humboldt, Garfield, Douglas and Washington. The Stock Yards are on the South Side, about five miles from the heart of the City. Pullman is now a part of Chicago, and is located about 13 miles south of City Hall.

The streets of Chicago, with a few exceptions, run at right angles, north and south and east and west. Streets which cross the Chicago River take the prefix N. on the North Side, and W. on the West Side.

Streets running north and south are numbered consecutively as follows: on the West Side the dividing line is West Randolph Street from the river to Union Park, and west of Union Park the division is made at Lake Street; on the North Side the numbering runs north from the river, and on the South Side, south from the river.

Streets running east and west are numbered; on the West Side, westward from the river; on the North Side, from the river to the lake; and on the South Side, from the lake to the river.

On the South Side the system of commencing each block with a new 100 is used along State and parallel streets south from Twelfth Street, so that the numbers between Twelfth and Thirteenth streets all commence with 1200, etc.

NEW ORLEANS.

The city extends from the Mississippi River north to Lake Pontchartrain, but only the portion nearest to the river is built up.

The City Park is about three miles northwest from the business portion. The Exposition Park, which was the site of the American Exposition, of 1884, is located on the river about four miles west from the heart of the city.

The streets mostly cross each other at right angles, and are arranged to conform with the bend of the river.

Canal Street is the main business and residence thoroughfare and is also the dividing line between the French or Creole and American parts of the city. Canal Street divides many of the cross-streets into north and south, but some change names entirely in crossing it.

Other prominent streets are St. Charles, Claiborne, Rampart, Esplanade and Royal. The numbering of the houses is somewhat irregular and defective. As a general rule it may be said that streets running parallel with the river are numbered north and south from Canal Street. Streets at right angles with the river are numbered from the river.

Nearly every street name has a duplicate in some other part of the city, and sometimes four or five streets will be found with the same name. In such cases the district is added to the address. The city is divided into seven districts, designated by numbers.

BOSTON.

The city of Boston includes all of Suffolk County except the city of Chelsea and the towns of Revere and Winthrop.

The city is divided into different sections known as: Boston proper, Charlestown, East Boston, South Boston, Dorchester, Roxbury, West Roxbury and Brighton.

Charlestown is to the north of the city proper, and contains the Bunker Hill Monument, which stands on Breeds Hill, not on Bunker Hill as generally supposed.

East Boston is the landing place of ocean steamers. In South Boston are the Dorchester Heights, from which a grand view may be had of the city and its surroundings.

Dorchester and Roxbury are south of the city proper, and Brighton is located along the Charles River, about four miles from the State House.

The cities of Cambridge, Somerville and Chelsea are actually parts of the city, but they are outside of the city limits, and have their own governments. Harvard University is located in Cambridge.

Numerous bridges and ferries connect the different parts of the city.

The Boston Common is right in the heart of the city. The Public Garden is to the west of the Common, separated from it by Charles Street.

Besides these two, the city has a very fine system of parks, extending southward and connected by boulevard driveways. The Back Bay Fens is a beautiful water park in this system, immediately adjoining the Back Bay District. Franklin Park is about 3 miles south of the Back Bay Fens. Marine Park, with its 3,000 feet long pier, at the eastern extremity of South Boston, is also a very popular place.

The wholesale district of the city is east of Washington Street along Franklin and neighboring streets.

The principal retail district is on Washington and Tremont and streets crossing them in the vicinity of the Common.

The Back Bay district is the finest residence section. Commonwealth Avenue is a grand boulevard 240 feet wide. Boylston Street is another prominent street in this section.

The numbering of houses generally runs outward from the center of the city.

DETROIT.

The principal street is Woodward Avenue, which runs at a right angle with the river and divides the city into the East and West sides. Jefferson Avenue, Fort Street, Cass Avenue, Gratiot Avenue, Grand River Avenue and Michigan Avenue are other important streets.

With the exception of the three last-named avenues and the system of short streets circling around and radiating from the Grand Circus, nearly all the streets are either parallel or at right angles with the river.

Campus Martius is an open square in the heart of the city, from which radiate some of the most important streets.

Fort Wayne is on the river bank, at the southern limits of the city.

Belle Isle Park is an island in the Detroit River, about two and one half miles from the foot of Woodward Avenue, from which steamers run there at short intervals. A bridge connects it with the city at Frontenac Avenue. The island is about two miles long and half a mile wide.

The Grand Circus mentioned above is a semi-circular park in the heart of the city.

A system of boulevards has been laid out around the entire city, just inside the city limits.

Numbers on streets crossing Woodward Avenue generally run east and west from that street. On streets parallel with Woodward Avenue the numbers run north from the river; and a general rule for other streets is that the numbers begin at the end nearest the center of the city.

MILWAUKEE.

Milwaukee and Menomonee rivers divide the city into three sections: East, West and South sides.

The business quarter is on both sides of the Milwaukee River, a short distance above its junction with the Menomonee.

The principal streets are East Water, Wisconsin and Grand Avenue, the two latter being virtually one street, changing name in crossing the river. The streets, with few exceptions, run at right angles, east and west, and north and south.

The numbering of houses is very regular, all parallel streets having the same number at the crossing of a given street. This system is used all over the city.

On the West Side the numbers run north from the Menomonee, and west from the Milwaukee River. On the east and west streets the numbers commence with a new 1 0 at every crossing, corresponding, with the name of the cross-street; at Second Street 200, Third Street 300, and so on to the city line.

On the East Side the numbers run north from the Harbor Inlet, and east from the river to the lake; on the South Side the numbering runs south from the Menomonee River, and west from the lake.

ST. PAUL.

The city is located on both sides of the Mississippi River, the business portion, and most important part, being on the north side. That portion south of the river is called West St. Paul.

The western limits of St. Paul form a part of the eastern limits of Minneapolis The distance between the business centers of the two cities in a straight line is about nine miles. The streets in the heart of the city run parallel and at right angles with the river, while in the outlying or new portions they generally run north and south and east and west.

Wabasha, Jackson and Sylvan streets constitute the dividing line between east and west, and streets crossing them are generally numbered east and west therefrom. In the western part of the city Summit Avenue divides the streets running north and south, and in the central and eastern sections the north and south streets are numbered north from the river.

MINNEAPOLIS.

The city is divided into the East Division (E. D.) and West Division (W. D.) by the Mississippi River. The principal business quarter is in the West Division, near the Falls of St. Anthony. The city is laid out on two plans. In the center, on both sides of the river, the streets are arranged to run parallel and at right angles with the river. In the outlying sections of the city the streets run due north and south, and east and west.

In the West Division, Hennepin Avenue to Superior, and Superior Avenue to the city line, is the dividing line between north and south, and streets are numbered north and south therefrom.

Nicollet Avenue, south of Grant Street, is the dividing line between east and west. Numeral streets and avenues are designated north or south, according to their location north or south of Hennepin Avenue. The numbers on streets parallel with the river run north and south from Hennepin Avenue, and on the streets crossing the former, east from the river, and in the southern portion, the numbering runs east and west from Nicollet Avenue.

In the East Division, Central Avenue and Division Street is the dividing line between north and south. The streets are numbered north and south therefrom, and the avenues are numbered from the river. In order to distinguish the numeral streets and avenues from those in the West Division, they are designated N. E. and S. E., instead of N. and S., thus: S. E. 4th St.; 4th Ave., N. E., etc.

The system of commencing each block with a new 100 is used, the number at each crossing of a numeral street always corresponding with the number of such street; for instance, No. 800 S. 4th Street would be at the corner of 8th Avenue, S., etc.

KANSAS CITY.

The streets, with very few exceptions, run at right angles, east and west and north and south.

The house numbers begin at the Missouri River for the north and south streets, and at Main Street for the east and west streets, increasing both ways.

The only exception to this rule is the section of the city east of Highland Avenue and north of Independence Avenue, where all streets running north and south are numbered north and south from Dora Street.

The system of beginning each block with a new 100 is used, the numbers at each crossing along the north and south streets always corresponding with the number designating the cross-street. The streets running north and south are designated by names, and those running east and west by numbers.

ST. LOUIS.

The city is located on the west bank of the Mississippi River, about 20 miles below the mouth of the Missouri. The built-up portion extends for about eight miles along the river.

St. Louis is provided with an extensive system of parks, the most important being Forest, La Fayette and Tower Grove parks. Shaw's Botanical Garden adjoins Tower Grove Park; it contains almost every plant that can be grown in this latitude. St. Louis Place and Hyde Park are other attractive places. The Fair Grounds and Zoological Garden are situated in the northern part of the city.

Across the Mississippi River is the city of East St. Louis, Ill., and two of the greatest bridges in the country span the river at this point, and give St. Louis an outlet to the east. The oldest of these, the Illinois and St. Louis bridge, starts from the foot of Washington Avenue, and the other, the Merchants' Bridge, is located about three miles up the river from the former.

The business section of the city extends for about a mile west from the river. The principal streets for retail business, as well as the fashionable promenades, are Oliver Street and Broadway.

The wholesale district includes Front Street (along the levee), and the streets nearest to it.

The finest residences are to be found on Pine Street, Locust Street, Washington Avenue, Lindell Avenue and other streets in that section.

The streets of St. Louis, for the most part, run parallel to and at right angles with the river, changing direction with the bend of the river.

The streets running parallel with the river are numbered north and south from Market Street and La Clede Avenue.

All streets at right angles with the river are numbered westward from the river.

OMAHA.

Omaha is situated on the west bank of the Missouri River. On the opposite side, in Iowa, and about three miles back from the river, is Council Bluffs. Two great bridges connect the two cities—one the U. P. R. R. bridge, and the other accommodating vehicles and an electric railroad.

The streets of Omaha almost without exception cross each other at right angles, running due north and south and east and west. The business center of the city is in the vicinity of Farnam and Sixteenth streets.

NEW YORK CITY, BROOKLYN AND JERSEY CITY.

These three cities actually constitute one great metropolis.

New York City is built on Manhattan Island, separated from the mainland by Harlem River and Spuyten Duyvil Creek, narrow streams. Part of the mainland also is within the city limits, making the entire length of the city, from the Battery to the northern limit, nearly 16 miles. The average width of the island is about two miles.

The North River is that part of the Hudson River which separates New York City from Jersey City, Hoboken, etc., on the west; it is about a mile wide. The East River is the western end of Long Island Sound, here narrowing in places to one-third of a mile, and separates New York City from Brooklyn, Long Island City, etc. Hell Gate is that part of the East River which separates Ward Island and Long Island, about seven miles north from the Battery.

Numerous ferries connect the different cities, and also afford transportation to Staten Island as well as the other islands in the harbor and the East River. A list of these ferries will be found in the index.

The great Brooklyn Bridge across the East River carries an enormous traffic, the railroad alone carrying over 130,000 passengers daily; the bridge is over a mile long, and its height, in the middle of the river, is 130 feet above high water. It cost $15,000,000 to build.

Atlantic steamers nearly all have their piers in the North River. The landing place for immigrants, which formerly was at Castle Garden, is now on Ellis Island, about a mile from the Battery. Quarantine Islands are in Lower New York Bay, off the coast of Staten Island.

The Statue of Liberty stands on Bedloe's Island, just south of Ellis Island; and Governor's Island, with Fort Columbus and Castle William, is about one half mile due south of the Battery.

Coney Island, on the coast of Long Island, directly south of Brooklyn, is the great excursion resort of the people of New York and neighboring cities.

Blackwell's, Ward's and Randall's islands, in the East River, belong to New York City, and contain the penal institutions, hospitals, asylums, etc.

Broadway is the most important street of New York. It runs north from the Battery to Central Park about five miles. The continuation of Broadway above Central Park is called The Boulevard. Wall Street, the money center of the country, runs from Broadway to the East River, a short distance up from the Battery.

Fifth Avenue, from Madison Square northward, is the most famous residence street in America.

The Battery is a small park at the lower end of the city. Going up Broadway, City Hall Park, Union Square and Madison Square are passed before reaching the great Central Park, which is about five miles from the Battery. Riverside Park extends in a picturesque, irregular outline along the North River for a distance of over two miles. Washington Square is at West Fourth Street and Fifth Avenue. Here is the great new Washington Arch. Other parks are Morningside, near Central Park, and Van Cortlandt, Bronx Park and others in the northern part of the city.

The streets in the lower part of the city are somewhat irregular, but above 14th Street they all run at right angles; those running across the city are called streets, and designated by numbers, increasing northward. The north and south streets are called avenues, and also designated by numbers (with a few exceptions), beginning at the East River and increasing westward to the North River.

The house numbers on the avenues run from south to north and on the streets east and west from Fifth Avenue. In the lower part of the city the numbering is somewhat irregular.

In Brooklyn, Fulton Street is the leading business street, and Clinton Avenue contains the finest residences. Prospect Park, about two miles from the Brooklyn City Hall, is very beautiful and affords a magnificent view of the surroundings. The Ocean Parkway leads from the southern end of the park to Coney Island.

The house numbers run east and south from the East River and the bay.

In Jersey City, Hoboken and Weehawken are the terminals of all the railroad lines to the metropolis, except the Long Island R. R., which terminates in Brooklyn, and the New York Central R. R. and New York, New Haven & Hartford R. R., whose trains run into the Grand Central Station in New York City.

BUFFALO

Is situated at the eastern end of Lake Erie, at the point where the Niagara River leaves the lake on its course over the Falls to Lake Ontario. The distance from Buffalo to Niagara Falls by railroad is 22 miles. Tonawanda, the great lumber market, and virtually a suburb of Buffalo, is midway between Buffalo and the Falls. On Grand Island, in the Niagara River, are a number of popular summer resorts, reached by steamers from the city.

Buffalo is well supplied with parks, the largest and most popular being The Park, with its Park Lake. The next in importance are The Front, on the river bank, and The Parade on the East Side.

Main Street divides the city into East Side and West Side, and is also the leading business street; other prominent business streets are Seneca, Washington, Michigan, Genesee, Broadway and Jefferson on the East Side, and Pearl and Niagara on the West Side.

Delaware Avenue and neighboring streets constitute the finest residence section, especially in the locality bounded by North Street, Richmond Avenue, Main Street and The Park.

The city is laid out on a general plan of streets converging towards the business center.

Streets starting at the lake or the river are numbered north and east therefrom. Streets crossing Main Street are numbered east and west from that street, with the exception of a few which start at the river front. All streets running north and south are numbered from south to north.

Each number counts ten feet along the street, so that, for instance, 528 Main Street is just 5,280 feet, or one mile, from the Harbor.

NIAGARA FALLS.

The Falls are formed by the Niagara River, which carries the waters of the great chain of lakes from Lake Erie down into Lake Ontario, and forms the boundary between the United States and Canada.

Near the Falls, on the American side, has grown up a city of about 15,000 inhabitants. A great tunnel is now under construction, to afford an outlet for water used in generating power for manufacturing purposes. A similar undertaking is under way on the Canadian side, near the Horse-Shoe Falls.

Prospect Park, the point of view nearest to the railroad stations, is only five or ten minutes' walk distant.

A bridge leads from the city across Bath Island to Goat Island, which separates the American Falls from Horse-Shoe Falls. Luna Island, on the brink of the American Falls, is reached by a small bridge from Goat Island. A stairway leads from Goat Island to the Cave of the Winds—a space between the rock and that part of the American Falls passing between Luna and Goat islands, sometimes called Central Falls.

At the other end of Goat Island is Terrapin Rock, affording a magnificent view of the Horse-Shoe Falls.

Near the upper end of Goat Island a series of bridges leads to the Three Sisters Islands, one of the most enchanting spots at Niagara.

From Prospect Park an inclined railway and a stairway lead to the river bank. From here a path runs to the rocks at the foot of the American Falls. At the foot of the inclined railway is the landing-place of the little steamer "Maid of the Mist," which makes regular trips across the river and up the river to a point within the spray from the Horse-Shoe Falls.

All of the places above mentioned are within the New York State Reservation, and free of access.

At the north end of the reservation the Suspension Bridge (foot and carriage) leads across the river in full view of the Falls, and a short distance above the Canadian end of the bridge begins the Queen Victoria Niagara Falls Park.

The point known as Table Rock offers what is probably the grandest view of the Falls. On sunny days a beautiful rainbow is often seen here. From this point a stairway leads back of the Horse-Shoe Falls.

About a mile above the Horse-Shoe Falls are Dufferin Islands, also within the limits of the park.

The length of the curve of the Horse-Shoe Falls is nearly 3,000 feet, and the average height of the fall is 154 feet; the water is at least 20 feet deep at the edge of the fall.

The American Falls are about 1,100 feet wide and 163 feet high. Three miles below the Falls is the Whirlpool, formed by an abrupt turn in the river.

The great Cantilever and Suspension railroad bridges cross the river between the Falls and the Whirlpool.

CINCINNATI.

The city is situated on the north bank of the Ohio River. On the opposite side, in Kentucky, are Covington, Newport and other smaller towns, connected with the city by a number of bridges and ferries.

The Miami Canal runs through the center of the city.

The district north of the canal is known as "Over the Rhine," and populated mainly by Germans.

The principal parks are: Eden, Burnet Woods, Washington, Lincoln and the Zoological Garden.

Fourth and Vine are the principal retail streets. Other important streets are Fifth Street, Central Avenue, Main Street, and in fact all streets in that neighborhood between Sixth Street and the river.

The finest residences are to be found on the hills in the outskirts of the city, such as Walnut Hill, Avondale, Mount Auburn, etc.

In the business part of the city the streets run very regular, parallel and at right angles with the river; those parallel with the river are, with a few exceptions, designated by numbers, increasing from the river.

On streets running at right angles with the river the house numbers begin at the end nearest to the river and run northward.

On streets parallel with the river the numbers run east and west from Main Street.

CLEVELAND

Is built on the shore of Lake Erie on both sides of Cuyahoga River.

The main part of the city is on the east side of the river. The principal business streets are Superior, Ontario, Seneca, Bank, Water and the lower part of Euclid Avenue. Euclid Avenue, from Erie Street up, is one of the finest residence streets in the country.

Monumental Square is a beautiful spot in the heart of the city. In the eastern end of the city is Wade Park, and near the business center is Lake View Park, along the lake front.

The city is laid out with long streets, radiating from the business center, and other shorter streets crossing the first, generally at right angles. House-numbers run outward from the center of the city and southward from the lake.

PHILADELPHIA.

The city is situated on the west bank of the Delaware River at the mouth of the Schuylkill.

The business portion of the city is on the peninsula formed by the two rivers.

The old village names are still extensively used in the outlying sections of the city, such as Germantown, Chestnut Hill and Manayunk on the northwest, and Richmond, Frankford and others on the northeast.

On the opposite side of the Delaware River is the city of Camden, N. J.

Fairmount Park extends over an area of over 3,000 acres on both sides of the Schuylkill River. It was the site of the Centennial Exposition in 1876. Here is an excellent Zoological Garden and the immense Fairmount Water Works.

In the center of the city are Washington, Logan, Rittenhouse, Franklin and Independence squares.

The streets in the business quarter are very regular, running at right angles. Principal streets running north and south are designated by numbers, beginning at the Delaware River and increasing westward; the only notable exceptions are Front Street (1st) and Broad Street (14th). Between these principal streets are often smaller streets, designated by names. Streets running east and west are all named. Chestnut, Broad, Market, Walnut, Vine and other streets in that vicinity constitute the business quarter. On Broad Street are also many elegant residences.

In Germantown and Chestnut Hill are the residences of many of Philadelphia's wealthiest citizens.

The house numbers run north and south from Market Street, and west from Delaware River to the city limits.

The system of commencing each square bounded by principal streets with a new 100 is used on all streets. This system originated here, and is often called the Philadelphia system.

PITTSBURG AND ALLEGHENY.

These two cities, practically one community, are located at the point where the waters of the Allegheny and Monongahela rivers meet, forming the Ohio River.

Pittsburg occupies the peninsula formed by the two smaller rivers, and also takes in considerable territory south of the Monongahela, while Allegheny is on the north side of the Allegheny and Ohio rivers.

Seven bridges span the Allegheny River between the two cities, and two more connect Pittsburg with the villages of Millvale and Sharpsburg, some distance above Allegheny.

The portion of Pittsburg south of the Monongahela is commonly known as Birmingham. Six bridges cross the Monongahela River from the city.

The business quarter of Pittsburg is at the junction of the rivers. The principal business streets are: Liberty Avenue, Fifth Avenue and Smithfield Street.

The locality around Fifth Avenue, in the east end, is the finest residence section.

The streets in the business quarter are arranged to follow the two rivers. In the upper part of the city the country is hilly and the streets necessarily irregular. House numbers run eastward from the business section, and northward from the Monongahela River.

Allegheny has a fine park, extending around the business center. The streets run regularly, parallel and at right angles with the Allegheny River, except in the hills in the upper part of the city. Federal Street is the leading thoroughfare.

IF MORE IS WANTED.

IF you want a State Map on a larger scale, or a City Map reaching to the city limits, ask your bookseller for it in the Matthews-Northrup Vest-Pocket Series, or enclose eight two-cent stamps to The Matthews-Northrup Co., Buffalo, N. Y., and they will mail you what you want.

This Vest-Pocket Series of Up-to-Date State Maps is printed on bond paper, in seven colors. They are county maps, with index to and population of every place. Compact, durable, artistic and accurate, they can not be equaled by any maps ever before sold for less than a dollar a piece.
